

## Email Compliance & Monitoring Solutions

### SecurExchange Corporate Edition

SecurExchange Corporate Edition takes the risk out of corporate email with the only integrated solution for intelligent, active email content and process control designed specifically for Microsoft Exchange Server. SecurExchange puts you in control to enforce your corporate policies, compliance and security measures on every single email — Internal, Inbound and Outbound. Unlike email appliances, managed services and other perimeter products that only monitor inbound or outbound messages, or roughly 15% of your total email traffic, SecurExchange protects and provides 100% email coverage.

#### Key Features:

- monitors and controls all internal, inbound and outbound email traffic
- includes advanced Intelligent Content Analysis and “Concept” scanning
- includes true “policy” management with reusable rule elements and automatic change propagation
- includes policy-based, automatic disclaimers and corporate signatures (see AutoContent description)
- includes “discovery” search feature (“after-the-fact” scanning of all Exchange message stores)

### SecurExchange Perimeter Edition

SecurExchange Perimeter Edition is designed to provide inbound and outbound email control and protection while still preserving the benefits of seamless Exchange Server integration. SecurExchange Perimeter Edition offers the same advance content analysis and real-time policy-driven enforcement capabilities as our SecurExchange Corporate Edition — except the Perimeter Edition only monitors inbound and outbound email traffic.

For organizations who need to prevent non-compliant external (outbound) email as their first priority SecurExchange Perimeter Edition provides an effective solution. Don't worry, when you're ready to add internal policy enforcement it's a simple software upgrade to our Corporate Edition — no hardware swap or network reconfigurations.

#### Key Features:

- monitors and controls all inbound and outbound email traffic
- includes advanced Intelligent Content Analysis and “Concept” scanning
- includes true “policy” management with reusable rule elements and automatic change propagation

### SecurExchange SBS Edition

SecurExchange SBS Edition is an all-in-one email control, anti-spam and anti-virus solution designed specifically for the Microsoft Small Business Server (SBS). SecurExchange SBS Edition includes all the features of SecurExchange Corporate Edition plus integrated anti-spam and anti-virus protection.

## Secure Email & Anti-virus Solutions

### SecurExchange S/MIME Encryption Option

SecurExchange S/MIME Encryption option protects highly sensitive information in, or attached to, emails with automatic, policy-based encryption and digital signature capabilities. Security policies can be enforced for email, and its attachments, by automatically encrypting and/or signing messages based upon sender, recipient, content or recipient's domain criteria. No user intervention or Outlook plug-ins are required. SecurExchange S/MIME Edition interfaces with Microsoft Active Directory and Certificate Authority to provide key creation and life cycle management without costly, time consuming redundant set-up and configuration.

SecurExchange S/MIME Encryption is available as an optional separate add-on for SecurExchange Corporate and Perimeter Editions.

#### Key Features

- o encrypt and/or digitally sign based on content, attachments, sender, recipients or recipient's domain
- o utilizes X.509 and S/MIME IETF standards
- o automatically generates Sender's Certificate without user interaction or client plug-in
- o automatically "discovers" existing certificates for any recipients in the Exchange message store
- o can process inbound messages based on encryption and digital signature attributes such as the Certificate Authority and Certificate Status (trusted, valid, expired, revoked) for streamlined workflow

### SecurExchange AV Corporate Edition

SecurExchange AV Corporate Edition is a complete Anti-Virus monitoring solution, designed specifically as an add-on for the Microsoft Exchange Server environment. SecurExchange AV Corporate™ is one of the few solutions to protect your entire organization by scanning all internal as well as inbound and outbound messages eliminating the possibility that destructive viruses or malware originates inside your perimeter defenses.

SecurExchange AV Corporate™ incorporates the award-winning Norman scanning and Sandbox technology, so you know it provides a zero-hour defense (the real-time ability to detect malicious code even before new definition files are provided) and the most effective and comprehensive Anti-Virus protection available.

#### Key Features (both versions)

- o zero-hour defense against viruses and malware
- o can take different actions based on virus classification

### SecurExchange AV Perimeter Edition

SecurExchange AV Perimeter Edition offers all the features and advantages of the AV Corporate Edition except for internal email monitoring. As a first line perimeter defense against viruses, malware and other email borne threats, or an additional layer of security, SecurExchange AV Perimeter Edition is affordable, effective protection.

## Anti-spam Solutions

### SecurExchange Anti-spam Edition

SecurExchange Anti-spam Edition provides comprehensive anti-spam protection. Available as a standalone product or as an optional add-on for SecurExchange Corporate and Perimeter Editions. SecurExchange Anti-spam Edition utilizes the same advanced Intelligent Content Analysis engine and linguistic techniques used in all our SecurExchange products to provide unparalleled accuracy and effectiveness in identifying and blocking spam.

### SecurExchange IMF Edition

SecurExchange IMF Edition is a plug-and-play extension for the Microsoft Intelligent Message Filter (IMF). Many organizations found that while the Microsoft IMF was effective at blocking spam, its rigid, inflexible design also resulted in limited control and actually higher rates of false positives. SecurExchange IMF adds the flexibility and granularity needed for better usability and management. Features like multiple SCL thresholds (that can have individual actions associated with them), and self-sensing whitelists and friendly domains to guarantee delivery of legitimate email.

## Corporate Disclaimer & Signature Solutions

### SecurExchange AutoContent Corporate Edition

SecurExchange AutoContent Corporate Edition provides the ability to automatically insert corporate signatures, disclaimers or other text or graphics to the beginning or end of your outbound and internal email messages. Our standard SecurExchange Corporate and SBS Editions include these features, however, we realize that sometimes all you want is to add this important disclaimer capability - when that's the case, SecurExchange AutoContent Corporate Edition is an affordable standalone solution to provide these time-saving, risk reducing features.

#### Key Features

- automatically insert text and graphics (i.e. disclaimers, corporate signatures)
- enhanced Word-like formatting tool
- personalize standard templates with name, title, phone, etc. with direct interface to Active Directory
- assign banners by groups or distribution lists
- automatic format conversion to HTML, Rich Text or Plain Text based on message format

### SecurExchange AutoContent Outbound Edition

Providing the same features as our AutoContent Corporate Edition except strictly for outbound email traffic (i.e. no internal mail disclaimers). SecurExchange AutoContent Outbound Edition is perfect for flexible, easy inclusion of standardized text and graphics like corporate signatures and disclaimers for your outbound email.
